

ABSTRACT OF THE DISCLOSURE

It was discovered that a compound represented by the general formula (I) shows strong c-Kit kinase inhibitory activity, and it inhibits proliferation of c-Kit kinase activated-cancer cells *in vitro* and *in vivo*. A novel anticancer agent showing c-Kit kinase inhibitory activity was discovered.

The general formula (I):

(wherein R<sup>1</sup> represents methyl etc., R<sup>2</sup> represents cyano etc., R<sup>3</sup> represents hydrogen etc., R<sup>4</sup> represents hydrogen etc.)
